PROFESSIONAL SUMMARY

Computer Engineer and Mobile App Developer with 3+ years of hands-on experience building, deploying, and maintaining cross-platform mobile applications using Flutter/Dart and React Native. Experienced in production app development, REST API integration, Firebase, Riverpod, payment systems, offline-first architecture, and Google Play Store publishing. Developed and published multiple Android applications across job discovery, healthcare, procurement, news, sports, productivity, utilities, and media, with strong focus on scalable architecture, performance, and user experience.

EDUCATION

Ahmadu Bello University, Zaria

- B.Eng in Computer Engineering – 2025. (CGPA: 4.01/5.00)

WORK EXPERIENCE

Mobile App Developer | OmegaPi Technologies (Remote | 1-year contract)

Dec, 2025 – Present

- Develop, deploy, and maintain production cross-platform mobile applications using Flutter and Dart, with reusable UI components and scalable architecture.
- Implement state management using Riverpod and Provider, integrating REST APIs and WordPress backends for authentication, dynamic content delivery, and data synchronization.
- Build and integrate payment and billing systems using Paystack, Flutterwave, Monnify, and Google Play Billing.
- Implement offline-first functionality, local caching, and performance optimizations using SQflite and shared_preferences.
- Manage production Android builds, Google Play Console submissions, releases, updates, and ongoing application maintenance.
- Developed and published multiple production applications across job discovery, healthcare, procurement, news, sports, utilities, productivity, and media categories.

PRODUCTION APPS — GOOGLE PLAY STORE

Developed and published multiple production Android applications currently available on Google Play Store, including:

- NGO Procurement & Contracts:— Flutter/Dart, Google Play Billing
- Live Football Score:— Flutter/Dart, real-time football data
- MediaCompress: Image and Video:— Flutter/Dart
- FlipBlitz: Flip, Match and Win:— Flutter/Dart

And many more Apps @: play.google.com/store/apps/developer?id=OmegaPi+Technologies and play.google.com/store/apps/developer?id=Magnatrus+Technologies

PROJECTS

1. JobSphere: International Jobs - Apk: <https://play.google.com/store/apps/details?id=com.omepapi.jobs&pli=1> *Flutter, Dart, Riverpod, REST APIs*

- Architected Flutter app integrating 3 official job market APIs (USAJobs, Reed UK, Workforce Australia) with real-time filtering and infinite scroll pagination
- Engineered local bookmark system using SharedPreferences with JSON serialization for offline access
- Optimized search performance with debounced input and implemented dark mode with theme persistence
- Integrated Google AdMob monetization strategy with banner, interstitial, and rewarded ad placements

2. FunTex :— Fashion Design Marketplace - GitHub: <https://github.com/Abdoul2146/FunTex>

Flutter, Firebase, Riverpod, GoRouter, Cloudinary, Flutterwave/Paystack/Monnify - webapp: <https://funtex.web.app/>

- Built complete e-commerce platform with user authentication, shopping cart, and order management.
- Integrated multi-gateway payment system (Flutterwave, Paystack, Monnify) for secure transactions.
- Implemented real-time order tracking and custom design ordering powered by Firebase Firestore.

3. NGOJobSite :— NGO Job Listing Mobile App

Apk: <https://play.google.com/store/apps/details?id=com.omegapi.ngojobsite>

Technologies: Flutter, Dart, Riverpod, GoRouter, Google Mobile Ads, flutter_html

- Developed a complete job discovery platform that fetches and displays curated NGO/non-profit opportunities with rich HTML formatting from WordPress API

- Implemented local bookmarking system and cross-platform job sharing functionality using shared_preferences and native share methods
 - Built rewarded ad monetization system to unlock application details, creating a sustainable revenue model with Google Mobile Ads integration
4. **StudyPal :— AI Learning Platform** - GitHub: <https://github.com/Abdoul2146/StudyPal>
(Flutter, Firebase, Gemini API)
- Built AI-powered tutoring system generating personalized study plans and quizzes.
 - Integrated YouTube learning resources and performance analytics.
 - Designed student progress evaluation workflows.
5. **Live Football Score:— Football Scores Mobile App – Apk: [Live Football Score - Apps on Google Play](#)**
(Flutter, Dart, Riverpod, Dio, GoRouter, Hive, Google AdMob, AppsFlyer)
- Built a premium livescore app with live scores, fixtures, league standings, and match details served through a Cloudflare Worker proxy (API-Football) for secure, key-free data access
 - Implemented full match detail view with visual pitch lineups (CustomPainter), match statistics, events, and top scorers for 6 featured leagues (Premier League, La Liga, Serie A, Bundesliga, Champions League, Ligue 1)
 - Engineered glassmorphic Material 3 design system with dark/light themes, theme persistence via SharedPreferences, Montserrat/Inter typography, and micro-animations with flutter_animate
 - Integrated Google AdMob banner and interstitial monetization with configurable ad unit IDs and AppsFlyer SDK attribution + deep-linking tracking
6. **KimsCut :— Barbershop Management System (React-Native, Firebase Firestore, Firebase Auth)**
GitHub: <https://github.com/Abdoul2146/KimsCut>
- Mobile platform designed to streamline barbershop operations through real-time service tracking, financial processing, and business analytics.
 - Implemented role-based access control (RBAC) supporting operators, cashiers, and managers with dynamic navigation.
 - Built a real-time service queue system using Firestore listeners enabling instant synchronization between staff devices.
 - Developed payment processing workflows supporting cash, card, and transfer transactions.
 - Created a business analytics dashboard visualizing revenue trends and staff performance.
 - Implemented CSV reporting system for exporting financial data for accounting.
7. **PrimeScan PDF Scanner – Apk: [PrimeScan: PDF Scanner - Apps on Google Play](#)**
(Flutter, Dart, BLoC/Cubit, Hive, Google ML Kit, Camera, pdf/printing)
- Built a full camera-based document scanner with flash control (auto/always/off), ultra-high-resolution capture, and Google ML Kit OCR text recognition with output cleanup
 - Implemented image enhancement pipeline (magic, grayscale, black & white filters)
 - Engineered multi-page searchable PDF generation — one image page per scan plus a dedicated "Recognized Text" page for OCR results, saved via pdf/printing
 - Created a local document library with Hive persistence (search by title/tag, rename, delete, tagging) and export via share_plus + gallery save (gal)
 - Integrated Google AdMob banner/interstitial ads with retry and preload logic, plus light/dark/system theme and scan-quality settings

TECHNICAL SKILLS

Languages: Python, Dart, TypeScript, SQL, Bash

Mobile Development: Flutter, Dart, React Native, Riverpod, Provider, GoRouter, Firebase, REST APIs, Google Play Console

Backend Development: FastAPI, Flask, REST APIs, GraphQL APIs

AI / Machine Learning: TensorFlow, Scikit-learn, Speech Recognition (Whisper / VOSK)

Tools & Platforms: Firebase, Git/GitHub, Linux, Windows

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA 1–3) – NITDA Local Academy
 - ITN (Apr 2022), SRWE (Dec 2022), ENSA (Jan 2023)
- Huawei Certified ICT Associate (HCIA) – Huawei Technologies
 - Linux Distribution (openEuler) – Nov 2024
 - Relational Database (openGauss) – Dec 2024
- Cybersecurity & Cloud:
 - Google Cybersecurity Certificate – Coursera | Oct 2024
- Software Engineering & AI:
 - ALX Software Engineering Program (Backend) – ALX Africa | Jan 2025
 - AI Career Essentials – ALX Africa | Nov 2024

SOFT SKILLS:

- Team Collaboration
- Research-Oriented
- Problem Solving
- Technical Communication
